IONIC FOR ENTERPRISE

Empowering Organizations to Build the Next Generation of Mobile Apps

The pressure to deliver new and innovative applications to both your customers and employees is never ending. The IT organization is often overwhelmed and under resourced to keep up with the demands of the business and can often have 150 or more applications in their development backlog. Having to build and maintain native applications is not only time consuming and expensive but it creates a significant amount of complexity in your IT architecture.

Ionic Framework dramatically helps an IT organization speed up their development cycle by allowing developers to build an application once using our web components across any platform. **Because Ionic apps use web based technology, updating an application can be done in hours and published across all platforms using one single code base saving both time and money.**

BENEFITS

- Build apps in weeks with one code base for all platforms

- No need to hire costly native app developers

- Make changes on the fly, allowing you to keep up with the needs of the business

- Drive user engagement by delivering a flawless Omni-channel user experience

- Don't spend hundreds of thousands of dollars on native application developers to build and maintain multiple code bases when you can use your current web developers to build an application using one code base that can update all applications at once but keep a native look and feel.

- Ionic Framework allows an organization to have a strategic platform to build applications across any device should they be for web, mobile, Progressive Web App (PWA) IoT or ChatBots, Ionic grows with your business needs.

- With the ability to create an application mockup using our Creator drag-and-drop tool we allow developers to share first version applications with their business stakeholders to ensure business requirements are followed and to reduce the amount of development time needed on actual build time.

#1 Adopted Cross-Platform Hybrid Framework	
Cross-platform UI Components	Ready-made web components, typography and base theme all designed to work across any platform allows you to build beautiful applications regardless of device.
First Class Developer Community	Ionic is a truly open source Framework and has over 6 million developers who have built over 4 million apps to date.
Native & Web Optimized	Ionic emulates native app UI guidelines and uses native SDKs, bringing the UI standards and device features of native apps together with the full power and flexibility of the open web. Ionic uses Cordova or Phonegap to deploy natively, or runs in the browser as a Progressive Web App.

Powerful Tools & Services for the App Dev Lifecycle

In addition to the open source Framework, Ionic offers an integrated suite of tools & services - Ionic Pro - to manage the development life-cycle of your application from testing, deploying, real-time updates, error reporting all from one single suite of applications.

Enterprise Level Support

Ionic provides full enterprise level support for any of your development needs from, Hot Fixes, Code Reviews, Response SLA's and Live Training we provide a single point of contact with a dedicated Slack Channel.
